

Hydro Sector Funding Reaches £26m

This March investment for the ninth hydro scheme was completed, taking the total funding arranged by Triple Point to £26m. Triple Point is the market leader in providing venture capital funding for Scottish hydroelectric projects.

This latest project is a £5.5m investment into a 1.3MW hydroelectric power scheme located near Loch Garry, Invergarry in the Scottish Highlands.

Within the overall portfolio eight schemes are currently under construction with the majority due to be grid connected by the end of 2015. The first scheme to receive funding, a £2.2m project at Fiunary on the Morvern Peninsula, began generating electricity for export in January 2015.
